DocStar: Work Done in October 2026

Summary of what was built and shipped, 1 to 27 October 2026, across hitman-api, hitman-ui, doc-rtc, docstar-editor, docstar-cli and docStarWebsite.

Major work

1. MCP server for every collection

Repos: hitman-api, hitman-ui

- Every collection now gets its own MCP server with a readable MCP URL and custom-domain support.
- Endpoint tools are generated from documented endpoints, with explicit annotation hints and domain-sibling support.
- New read-only **call_any_read_api** tool for GET requests, alongside the general call tool.
- Owners can edit the MCP skill and rewrite built-in tool descriptions.
- New MCP tab in the UI to manage tools, skill, OAuth and custom domain.
- OAuth code/exchange endpoints and a consent page for connecting AI assistants.
- Owners can require sign-in when people connect, via a new switch in OAuth settings.
- API key tool for secure key management, and an AI feedback endpoint so assistants can send feedback to DocStar.

2. docstar-cli (v1.4.1 to v1.7.1)

Repos: docstar-cli, hitman-api, hitman-ui

- Collections are identified by an immutable slug instead of a CLI name across code, docs and commands.
- Root endpoints supported in the CLI (**scope=root** on module.json) for cleaner command generation.
- **init** now uses the collection slug, supports fetching from sub-paths, and works with custom domains.
- Secure API key handling with new **key** commands, including **key emit** to write keys to project env files.
- New CLI sign-in routes (**/p/cli-auth/***) and MCP tool controls on the API.

3. Editor migration from TipTap to BlockNote

Repos: doc-rtc, docstar-editor, hitman-ui

- Document content handling migrated from TipTap to BlockNote, pinned to 0.42.0, with legacy Tiptap migration.
- New blocks: alert, Link to Page (with a redesigned picker) and HTML/script embed with base64 encoding.
- Markdown API and lossless markdown round-trip for custom blocks.
- Paste improvements: Google Docs colors fixed, base64 images uploaded, single-h1 headings, Claude-like block spacing.
- Public pages now render the new editor block types; lazy-loaded doc editor.
- docstar-editor package released as 0.4.1 through 0.4.4.

4. AI and LLM-friendly publishing

Repos: hitman-api, hitman-ui

- Published markdown endpoint and raw markdown route for any published page.
- HTML-to-markdown conversion for published content.
- **llms.txt** generation and improved LLM text for API collections.
- Page and endpoint APIs improved for AI assistants.
- Copy-prompt buttons replace "Ask AI", plus a new PromptHero component and connector management UI.

5. Redesigned API documentation experience

Repos: hitman-ui

- API documentation UI completely redesigned.
- Default selected API reference, with a fix for the blinking home page.
- Public endpoint description rendering and response handling improved.

6. docstar.io rebuilt as an agent-first docs site

Repos: docStarWebsite

- Website rebuilt as an agent-first API docs site.
- DocStar MCP quickstart guide and a copy-agent-prompt component.
- Terms of Service page and updated navigation.
- Deployment setup on Cloudflare with a Hyperdrive database connection and clearer database error handling.
- AGENTS.md and a canonical docs suite for AI-driven development.

7. Collection slugs

Repos: hitman-api, hitman-ui

- Slug field on collection create and edit.
- Unique slug generation, reserved-slug validation and consistent slug handling across collections.

Smaller work and fixes

Growth and tracking

- UTM tracking with a flush mechanism on the API.
- Outbound UTM hook in the UI, with a self-referral check.

UI polish

- New onboarding components and styling; login page layout refresh.
- New border color tokens for light and dark themes.
- Page settings section and entity ID management.
- Blog styling and structure improvements.
- Layout and overflow consistency fixes; CSS refactors; heading and logo background update.
- Root-level aliases for custom domains.
- Date handling fixes for pages and blog posts.

Platform and fixes

- Real-time collaboration and cache service improvements; RTC data updated on page update.
- JWT token error handling and proxy token validation hardened; admin status corrected in API token validation.
- URL name sanitization fix on page update; meta data now prioritizes manual entries.
- Next.js config updated to disable RSC request header validation.
- Environment tab and public endpoint component enhancements.
- Editor merge review fixes: Node 22 build, page-scoped auth, collab tokens, converter bugs, null safety.
- Pasted colors outside the palette dropped on markdown export; HTML embeds encoded as base64 for safer embedding.
- Documentation fix to the editor README (collab example).
