Major work this month

API+UI Collection MCP servers

Every published docs collection now gets its own MCP server (via viaSocket): endpoint tools, editable skill, readable URL, custom domains, read-only GET tool, owner-editable tool descriptions, tool logs and cURL tools, per-collection viaSocket flows.

API+CLI API keys & sign-in for MCP / CLI

API-key setup tool, multiple credentials from multiple sources, per-user {{placeholders}}, OAuth 2.0 sign-in for docstar-cli, *key pull* / *key emit* to write keys to .env.

CLI docstar-cli 1.4 → 2.0.1

Collection slug-based hierarchy, root endpoints, sign-in, key management, "run any collection live" (init only registers), module.json as tree, update notices, requirement-gap fixes.

UI Public docs redesign

Completely redesigned API documentation UI, new published home page, prompt-hero and copy-prompt buttons, raw markdown endpoint, root aliases for custom domains, new indigo palette, onboarding and /welcome.

WEB docstar.io rebuilt agent-first

New agent-first site with MCP quickstart, Cloudflare + Hyperdrive database, internal Admin (ideas/feedback inbox, site editor, analytics, A/B tests), Terms page, Product Hunt page.

WEB SEO + Blog autopilot

Daily AI blog drafts approved in Admin; SEO plan, keyword map, crawler, audit, report, CI suite with Lighthouse budgets; llms.txt checker; hidden page templates.

AI AI-ready outputs

Published HTML→Markdown, markdown endpoint & twins, llms.txt generation, LLM text for API collections, AI feedback endpoint, auto-filed ideas from MCP errors.

EDITOR Editor, embeds & hygiene

HTML/script embed block (base64), paste fixes (Google Docs colors, base64 images), editor 0.4.x; secure embed token handling; AI-ready docs set, dead-code cleanup, UTM tracking.

All work by repository

hitman-ui

Main frontend · 117 commits

MCP & AI connectivity

- Consent page for connecting AI assistants (MCP OAuth); later OAuth page removed and simplified
- Collection MCP servers via viaSocket; MCP tab: tools, skill, OAuth, custom domain, tool logs, cURL tools
- Edit built-in tool descriptions; switch to turn off built-in call tools; instructions dialog cleanup
- API keys for developers (several sources, key field setting), API key tool, secure key management
- Connector management UI; "Connect AI" integration; CopyPromptButton replaces AskAiButton; PromptHero for API collections

Public docs & rendering

- Complete API documentation UI redesign; endpoint card/description rendering; overflow & sticky sidebar fixes
- Published home page redesign; default selected API reference; fixed home blink/flicker/refresh bugs
- Raw markdown API route; root-level aliases for custom domains; module.json at any depth & scope=root
- Strip non-palette pasted colors; HTML/style handling; unresolved-variable URL handling; required:false treated as optional
- Blog styling, date handling and a setting to show/hide public dates

Product, admin & design

- Slug field for collections; PageSettingsSection; entity ID & environment management
- DocStar internal admin (ideas/feedback inbox, site editor, analytics) — later moved to docstar.io
- Onboarding, /welcome route, refreshed indigo palette, border variables, login layout, Shuttle test theme
- UTM tracking hook (outbound UTM, self-referral check); embed fixes (token not signing out, parent-frame-only messages)
- AI-ready docs (AGENTS.md, CLAUDE.md, docs/); evidence-based dead-code/dependency removal; docstar-editor bumps to 0.4.4

hitman-api

Main backend · 99 commits

MCP

- OAuth code/exchange endpoints (later removed); MCP server per collection; endpoint tools; editable skill; readable URL & custom domains
- Read-only call_any_read_api tool; owner-rewritable tool descriptions & annotations; turn off built-in call tools; no default instructions
- API key setup/creation tool, hardened, multi-source credentials, {{name}} placeholders, key tool for viaSocket
- Per-collection tools on their own viaSocket flows with logs; migration script; custom-domain MCP script; error logging & auto-filed ideas

CLI, publishing & AI outputs

- docstar-cli sign-in routes (/p/cli-auth/*), OAuth app sign-in; module.json as tree, root scope, skip example endpoints, refreshed params
- HTML→Markdown for published content; published markdown endpoint; llms.txt generation; LLM text for API collections; AI feedback endpoint

Platform

- Collection slugs (unique generation, reserved-slug validation); cache management; RTC data update on page update; collab/error handling
- Ideas & Site content management APIs; UTM tracking & flushing; JWT/proxy-token fixes; embed base64 restore; endpoint required/optional normalisation

docStarWebsite

Marketing site · 42 commits

Rebuild & platform

- docstar.io rebuilt as agent-first API docs site; MCP quickstart and CopyAgentPrompt; /home route; Explore-more footer link; Terms of Service
- Database via Cloudflare Hyperdrive, error handling, wrangler config; self-hosted fonts for Cloudflare build; AGENTS.md & canonical docs suite
- /producthunt page; hidden templates (about, customers, compare, solutions, changelog, tools)

Admin, growth & SEO

- docstar.io/admin: A/B tests with design looks, lean tracking, middleware event recording, ideas with team notes, code-version loading in editor
- Blog autopilot: daily AI drafts approved in Admin
- SEO: plan & keyword map, crawler, audit, report, shared metadata/JSON-LD helper, robots/sitemap/markdown twins, copy rewritten per keyword map, CI suite (content, crawl, Lighthouse budgets), llms.txt checker

docstar-cli

25 commits · v1.4.1 → 2.0.1

- Collections identified by slug (replaces CLI name/domain); cliOf utility; root endpoints; init from sub-paths
- Key management: key pull, key emit (v1.7), env-file writing with metadata, --env credentials
- OAuth 2.0 login via DocStar API; sign-in & API-key flow (1.8.0); no repeated credential prompts
- 2.0.0: run any collection live, init only registers; update-notice plugin; clean dist before publish
- Fixed requirement gaps: no-TTY prompt, JSON payload checks; Windows home-folder tests

docstar-editor

9 commits · 0.4.x

- HTML/script embed block with base64 encoding; paste fixes (Google Docs colors, base64 image upload)
- Single-h1 headings, Claude-like block spacing; version in connection logs; README collab fix

doc-rtc

2 commits

- Markdown ↔ BlockNote HTML embed support; drop non-palette pasted colors on markdown export

docstar (write-ups)

3 commits

- LinkedIn posts, monthly report, requirements; Product Hunt launch kit; Reddit demo GIF & r/SideProject draft
